

## 1. Check App Management.

Please check your APP management, the address should be the same as the following picture. If not, please modify it.

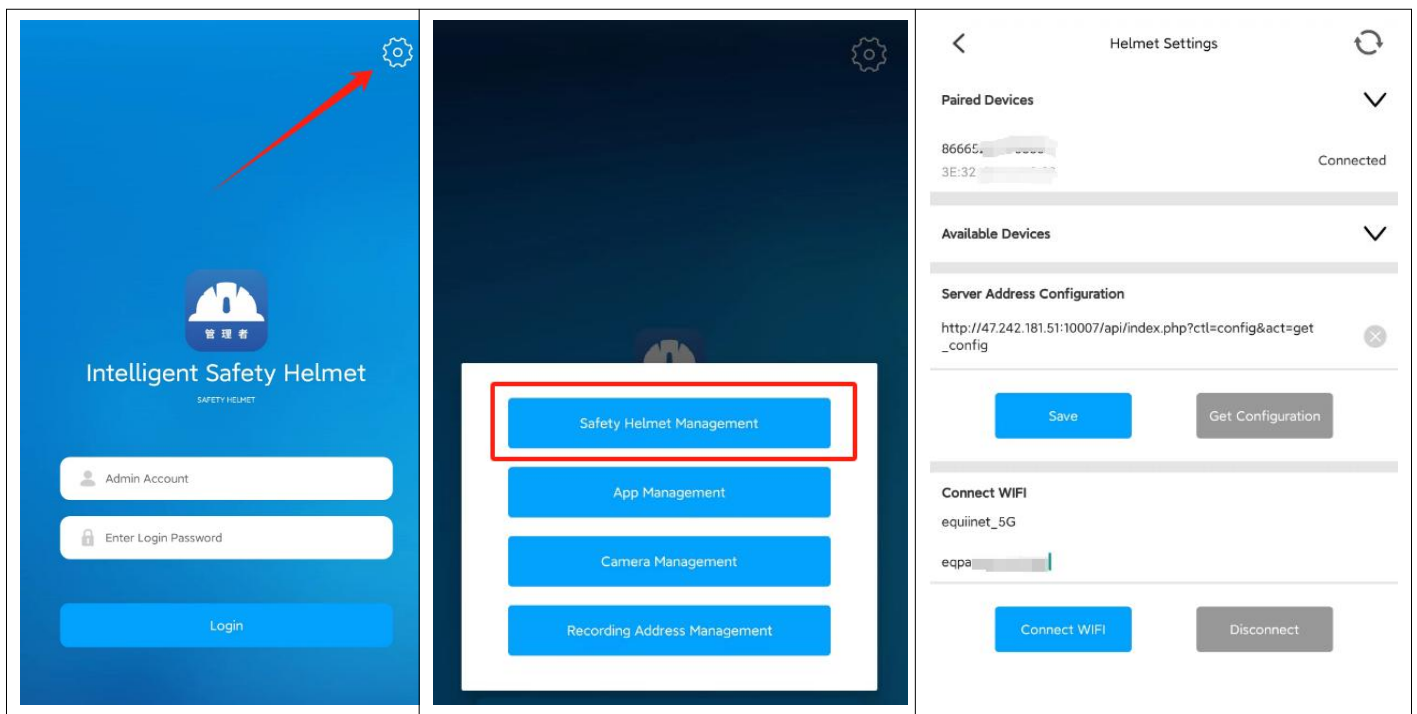

<http://47.242.181.51:10007/api/>  
<ws://47.242.181.51:10000>

## 2. Wi-Fi Connection by APP

Please note that if you want to use the APP to connect Wi-Fi to the helmet, your phone needs to turn on Bluetooth and connect to Wi-Fi, helmet is power on, the helmet will automatically recognize your current phone's Wi-Fi.

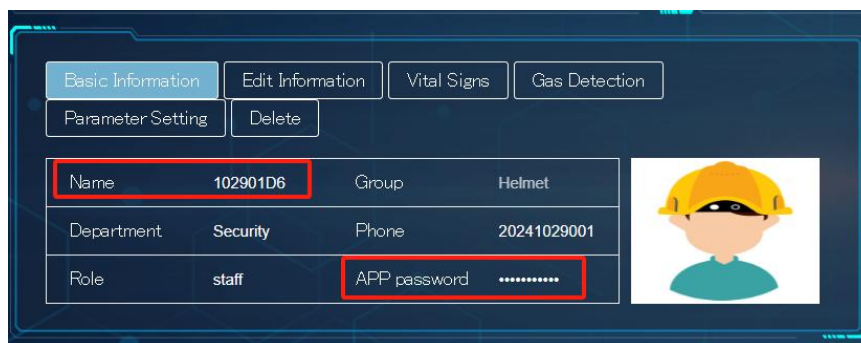

In Helmet Settings page, You will see there is a helmet's ID in available device. You need to tap on it to pair. After paired, the server address configuration will automatically fill in an address. If not same as the picture three, please modify it. Then input your Wi-Fi password to connect.

Server Address Configuration:  
[http://47.242.181.51:10007/api/index.php?ctl=config&act=get\\_config](http://47.242.181.51:10007/api/index.php?ctl=config&act=get_config)

### 3. Login

If you are using administrator APP, the login account is the same as the website account.

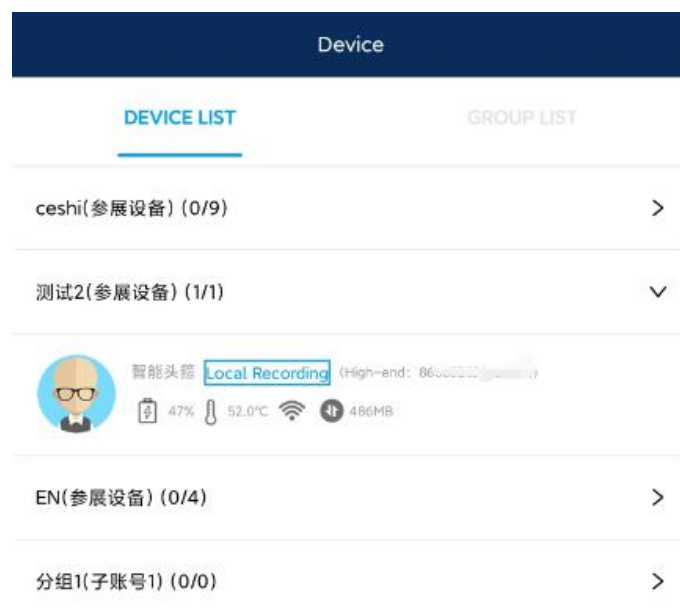

If you are using personal APP, the login account is the username of helmet, the password is the APP password of helmet.

### 4. Device Management

After login, you can see all helmets in monitoring page. In personal APP, only one helmet.

Most usage of features are same between admin and personal APP.

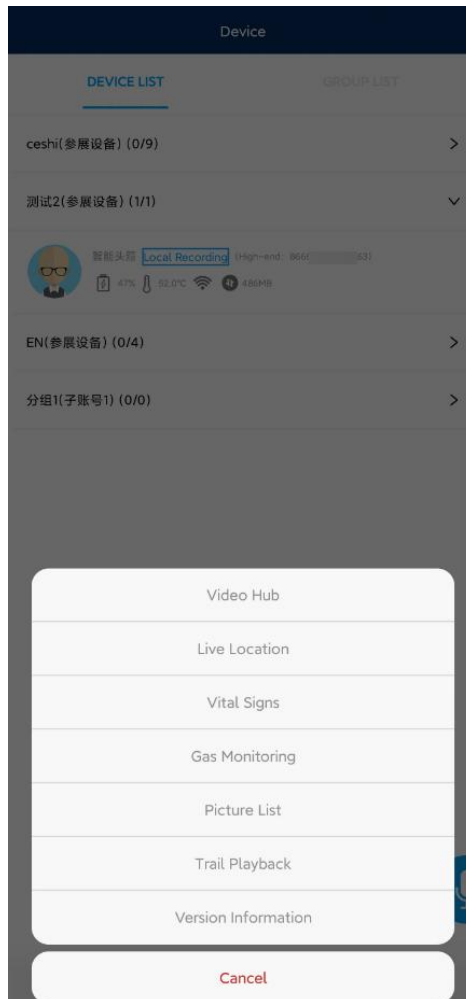

Administrator APP Interface

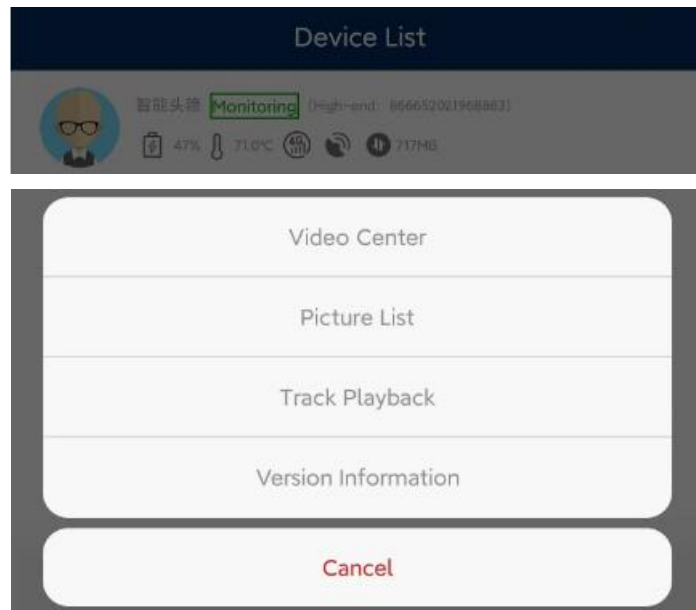

Personal APP Interface

Tap on helmet to use more features.

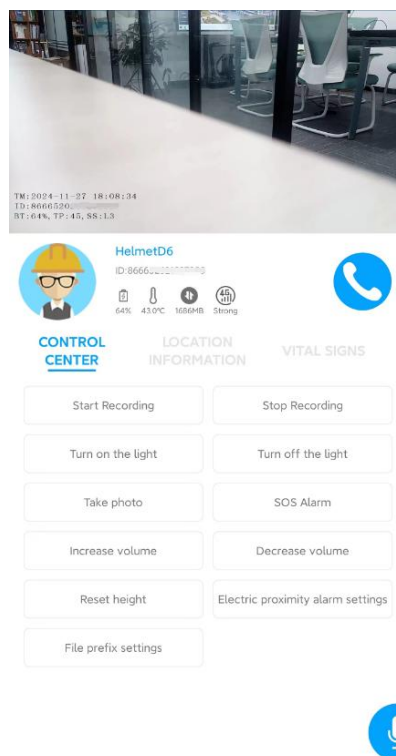

Administrator APP Features

Personal APP Features
